

TwinaForms Code Analyzer Upload Packet

Date: 2026-08-24

Package version: 0.14.0.1

Subscriber Package Version ID: 04tgL000000009FQAW

Files

- appexchange-security-focused.html
- appexchange-security-focused.json
- TwinaForms_Code_Analyzer_ISV_Response_2026-08-24.md

Source Documents Checked

This packet is for Salesforce Code Analyzer, not the official Salesforce Source Scanner / Checkmarx report.

The 2026-08-20 folder contains the current Source Scanner / Checkmarx evidence and explanation:

- security-reports/source-scanner/isv-submission-2026-08-20-0.14.0.1/TwinaForms_Checkmarx_False_Positive_Explanation_2026-08-20.md

For Code Analyzer, the latest current report files are under:

- security-reports/code-analyzer/pre-release-current/appexchange-security-focused.html
- security-reports/code-analyzer/pre-release-current/appexchange-security-focused.json

The older Code Analyzer response from 2026-06-05 references package version 0.10.0.5 , and the older ProtectSensitiveData note from 2026-04-29 covers only one subset of the current findings. The 2026-08-24 response in this folder refreshes those explanations for package version 0.14.0.1 and the current focused report.

Summary

The staged focused AppExchange Code Analyzer report contains:

- Critical findings: 0
- High findings: 0
- Moderate findings: 28

The remaining Moderate findings are keyword-based sensitive-data or hardcoded-credential matches for package terms such as signature , token , key , and secret .

Upload the focused report together with TwinaForms_Code_Analyzer_ISV_Response_2026-08-24.md . Do not use the old June response document for the 0.14 submission because it references package version 0.10.0.5 .
